glucan endo-1,3-beta-D-glucosidase (EC 3.2.1.39) - garden pea
W.Alternate names: beta-1,3-gluconase
C:Species: Pisum astivum (garden pea)
C:Date: 23-Apr-1999 sequence_revision 23-Apr-1999 #text_change 18-Aug-2000
C:Accession: T06552; S28430
R.Chang, M.M.; Culley, D.E.; Hadwiger, L.A.
Plant Physiol. 101, 1121-1122, 1993
A.Title: Nuclocitide sequence of a pea (Pisumsativum L.) beta-1,3-glucanase gene.
A:Reference number: 21575; MUID:94143473
A.Recession: T06552
A:Status: translated from GB/EMBL/DDBJ

    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                            mitted (FEB-1997) to the EMBL/GenBank/DDBJ databases.
FUNCTION: ENDOCENOUS ACTIVATOR OF INTESTINAL GUANYLATE CYCLASE.
IT STIMULATES THIS ENZYME THROUGH THE SAME RECEPTOR BINDING REGIO
AS THE HEAT-STABLE ENTEROTOXINS.
SIMILARITY: BELONGS TO THE GUANYLIN FAMILY. ALSO SIMILAR TO HEAT-
STABLE ENTEROTOXINS.
                                                                                                                                                                                                                                                                                                                         GGVLVQDG

Identification as the mete gene product.";

Eur. J. Blochem. 263:789-796(199).

-I- FUNCTION: CATALYZES THE TRANSFER OF A METHYL GROUP FROM METHYLCOBALAMIN AND METHYLCOBINAMIDE TO HOMOCYSTEINE RESULTING IN METHYLCOBININE FORMATION.

-I- COFACTOR: ZINC; BINDS ONE MOLE PER SUBUNIT (BY SIMILARITY).

-I- COFACTOR: TERMINAL STEP IN THE DE NOVO BIOSYNTHESIS OF METHIONINE.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC (17). The peptide antagonists are based on a common motif of ZOT and human zonulins, which is believed to be critical for receptor CC and human zonulins, which is believed to be critical for receptor CC recombinant DNA techniques. The peptide antagonists are used as an CC antiinflammation, where they bind to the ZOT receptor in the intestine CC and yet does not physiologically modulate the opening of TJ in the CC increased intestinal permeability and the peptide is useful for CC treating intestinal conditions that cause protein losing enteropathy caused by infection, e.g. Clostridium difficile infection, e.g. clostridium difficile infection, e.g. clostridium difficile infection, conditions, viral gastroenteritis, parasite CC collagenous colitis, inflammatory bowel disease, disease with CC collagenous colitis, inflammatory bowel disease, diseases marked by lymphatic obstruction, e.g. congenital intestinal lymphangiectasia, correction of congenital heart disease with Fontan's operation, collicis of congenital heart disease with Fontan's operation, collicis of congenital heart disease with Fontan's operation, collicis, conserving co

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (TJ). The peptide antagonists are based on a common motif of ZOT and human zonulins, which is believed to be critical for receptor binding. They can be prepared by chemical synthesis or by use of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This present sequence is that of a peptide antagonist of zonul (2), one of 25 such peptides (see Y79105-29) of the invention, which bind to a zonula occludens toxin (ZOT) receptor, yet do physiologically modulate the opening of mammalian tight junction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New peptide antagonist of zonulin useful as antiinflammatory agent for treating cerebral ischemia, stroke, cerebral edema, gastritis, shigellosis, viral gastroenteritis, meningitis, encephalomyelitis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; Page 45; 69pp; English

                                                                                                                                                                                                                                                                                                                                                                                             RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This peptide comprises the first epidermal growth factor-like domain (EGF-1), i.e. amino acid residues 105-135, of human Zneul (see W88381), a new neuro-growth factor-like protein. Zneul can be used as a growth, maintenance, or differentiation factor in the spinal cord, heart, spleen, testis, thyroid and lymph nodes. It may also play a role in breast cancer, glioblastomas, and pituitary adenomas. Zneul may also be used to treat Alzheimer's disease, cancer, to repopulate blood cells after chemotherapy, to stimulate myofibroblast proliferation, stimulate or inhibit growth factors myofibroblast proliferation, stimulate or inhibit growth factors regenerate nerves. Claimed Zneul polypeptides (see also W8832-97), including specific domains of Zneul and epitope-bearing portions of Zneul, can be used to raise specific antibodies for use e.g. in

Zneul may also play a role in breast cancer, glioblastomas, and pituitary adenomas. Zneul can be used to treat Alzheimer's disease, cancer, to repopulate blood cells after chemotherapy, to stimulate myofibroblast proliferation, stimulate or inhibit growth factors made in the placenta, in fertility and contraception, or to regenerate nerves. Claimed Zneul polypeptides (see also W88382-97), including specific domains of Zneul and epitope-bearing portions of Zneul, can be used to raise specific antibodies for use e.g. in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; CC dermatclogical; immunosuppressive; antiinflammatory; antibacterial; CC antiviral; antifungal; antirhematic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an CC ORFX-associated disorder. The nucleic acids me used to express ORFX CC proteins in gene therapy vectors. The proteins and nucleic acids may be CC used to treat cancers, proliferative disorders, neurodegenerative CC disorders, osteoarthritis, graft vs host disease, cardiovascular disease, CC diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune CC disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and CC cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          B41638
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

Zneul is a new neuro-growth factor-like protein that can be used as a growth, maintenance, or differentiation factor in the spinal cord, heart, spleen, testis, thyroid and lymph nodes. Zneul may also play a role in breast cancer, glioblastomas, and pituitary adenomas. Zneul can be used to treat Alzheimer's disease, cancer, to
                                                                                                                                                                                                                                                                                   Zneu-1; neuro-growth factor-like protein; human; breast glioblastoma; pituitary adenoma; Alzheimer's disease; the nerve regeneration; haematopolesis; fertility; contraces
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 repopulate blood cells after chemotherapy, to stimulate myofibroblast proliferation, stimulate or inhibit growth factors made in the placenta, in fertility and contraception, or to regenerate nerves. Claimed Zneul polypeptides (see also W88382-97), including specific domains of Zneul and epitope-bearing portions of Zneul, can be used to raise specific antibodies for use e.g. in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        W88390 standard; Protein; 169 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  disease,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes novel cDNA sequences (A) highly expressed in cormal uterine tissue which can have anticancer and cytostatic activity cand can be used for gene therapy. (A) are used (i) for recombinant can be used for gene therapy. (A) are used (i) for recombinant can be used for gene therapy. (A) are used (i) for recombinant can be used for gene therapy and (ii) to isolate complete genes.

CC (B) are used (i) to identify agents suitable for treatment of uterine cancer; (i) directly for treating this form of cancer (including cancer; (i) directly for treating this form of cancer (including cancer) from gene therapy vectors) and (ii) for generation of capecific antibodies. (A) are identified by assembling ESTs (expressed sequence tags) from a particular tissue type before comparison of caperession patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTs from different libraries may represent condifferent parts of the same unknown gene, distorting the estimated conference of occurrence in a particular tissue. Y59838-Y59892 represent protein fragments encoded by the human uterine tissue derived cDNA can be a supplementary of the supplementary that the fact that an aparticular tissue tissue derived cDNA can be a supplementary to the human uterine tissue derived cDNA can be a supplementary to the human uterine tissue derived cDNA can be a supplementary to the human uterine tissue derived cDNA can be a supplementary to the human uterine tissue derived cDNA can be a supplementary to the human uterine tissue derived cDNA can be a supplementary to the human uterine tissue derived cDNA can be a supplementary to the human uterine tissue derived cDNA can be a supplementary to the human uterine tissue derived cDNA can be a supplementary to the human uterine tissue derived cDNA can be a supplementary to the human uterine tissue derived cDNA can be a supplementary to the human uterine tissue derived cDNA can be a supple
